MAINTENANCE INSTRUCTIONS

GENERAL INFORMATION:

Blind Spot lets you discover that place on your retina where the optic nerve enters the eye. At this spot there are no rods or cones and so you can't see any image that falls on this spot. This exhibit consists of a table with cleats to contain the laminated pieces of artwork that creates the effect.

General Cleaning:

Most of the exhibit may be cleaned with a soap solution. The graphics panel should be cleaned with a plexi cleaner and a soft grit-free rag.
