Group Inquiry at Science Museum Exhibits

Getting Visitors to Ask Juicy Questions

Joshua P. Gutwill • Sue Allen

This book outlines the development and evaluation of the Juicy Question activity. Juicy Question is an innovative activity designed to help science museum professionals enhance group inquiry at exhibits, thus deepening the learning generated among families and school groups. Juicy Question emphasizes two key skills: asking questions that lead to fruitful inquiry and articulating subsequent discoveries.

Both research report and how-to manual, this book outlines the development and evaluation of the Juicy Question activity, demonstrating how it affects behavior in museum visitors, and at the same time teaches valuable inquiry skills useful in a variety of informal education settings.
